

# Scenarios of future socio-demographic trends in Asia to support climate change and sustainable development research

Brian O'Neill, NCAR

Asian Population Forum

Asian Demographic Research Institute, Shanghai

October 11, 2016

# Scenarios dominate climate change analysis

Alternative visions of how future may evolve

Rationale:

Deep uncertainty

Facilitate integrated research and assessment

1990

1992

2000

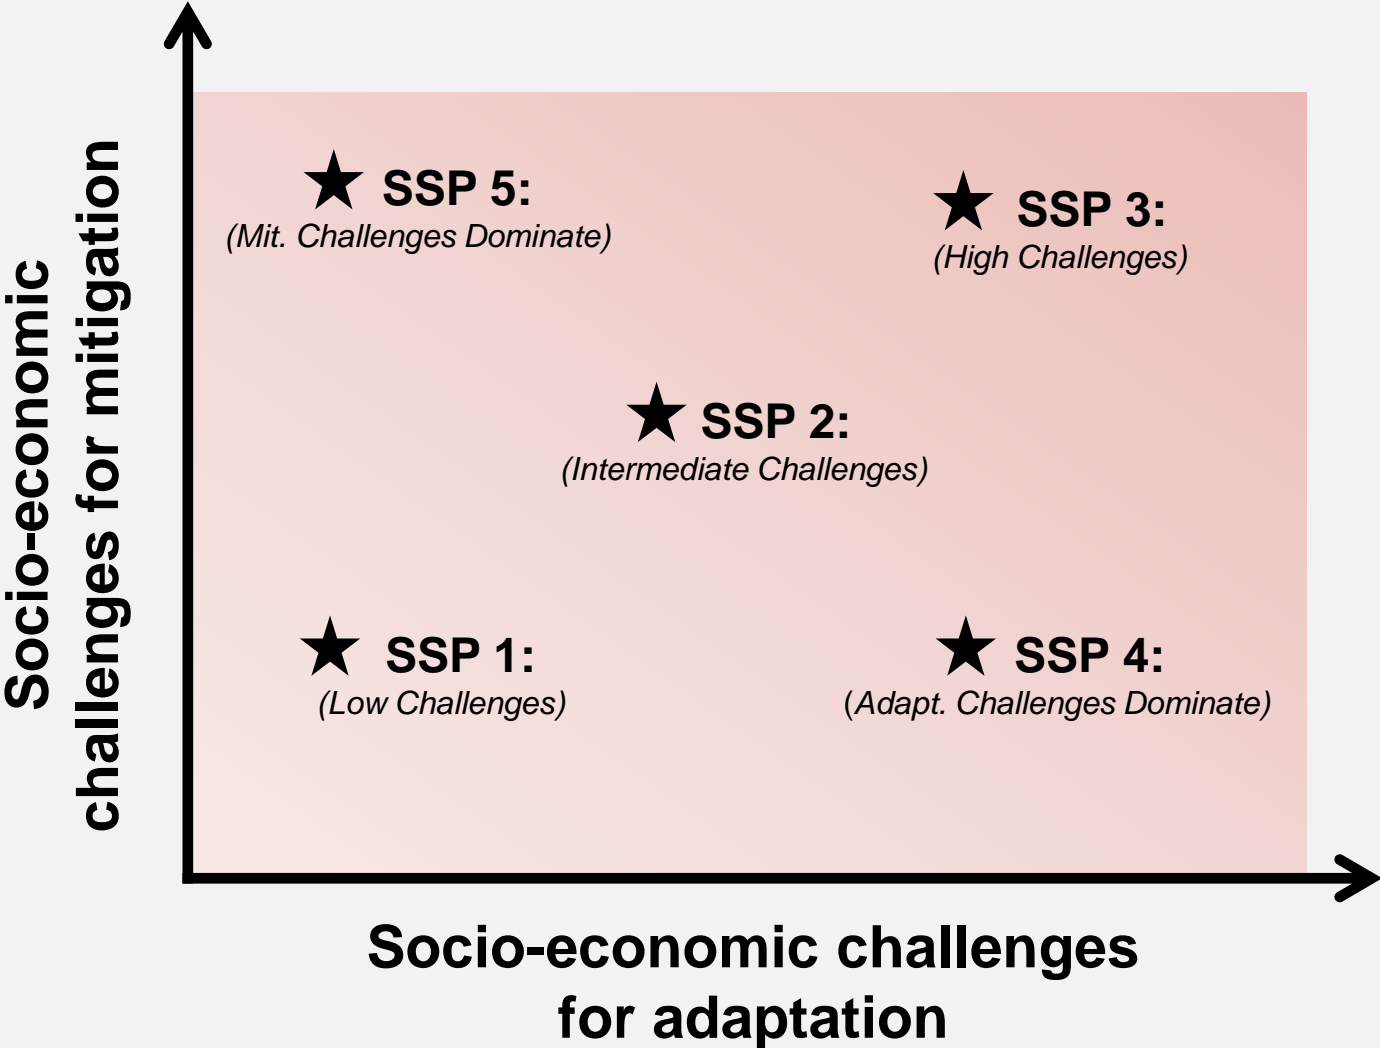

2014

“Shared Socioeconomic Pathways”

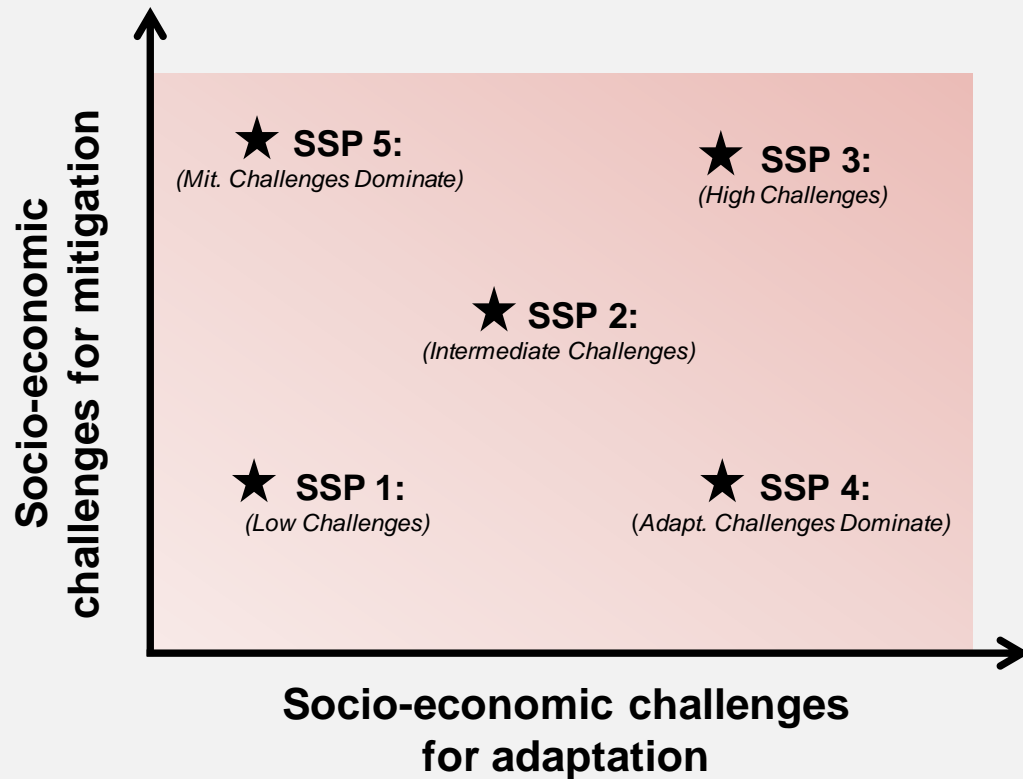

# Shared Socioeconomic Pathway (SSP) Logic

Relevant range of uncertainty spanned: challenges to adaptation, mitigation

O'Neill et al., 2014.

# Shared Socioeconomic Pathways (SSPs)

## Narrative

Qualitative description of broad patterns of development  
Logic relating elements of narrative to each other

## Quantitative elements

National:  
Population  
Education  
Urbanization  
GDP

Subnational:  
Spatial population

# SSP3 Narrative

## SSP3: Regional Rivalry

Multi-pole Cold War

Conflict, focus on security

Barriers to trade, migration

Little investment in health, education

Slow technological progress

Weak institutions

Slow income growth

(→ mostly high fertility, high mortality, low migration, slow urbanization)

*What might Asia look like (especially demographically) in a world like this?*

# SSP5 Narrative

## **SSP5: Fossil-fueled development**

Rise of the global middle class

Competitive markets

Rapid technological progress

Large investments in human well being (health, education)

Well functioning institutions

Rapid economic growth

(→ mostly low fertility, low mortality, high migration, rapid urbanization)

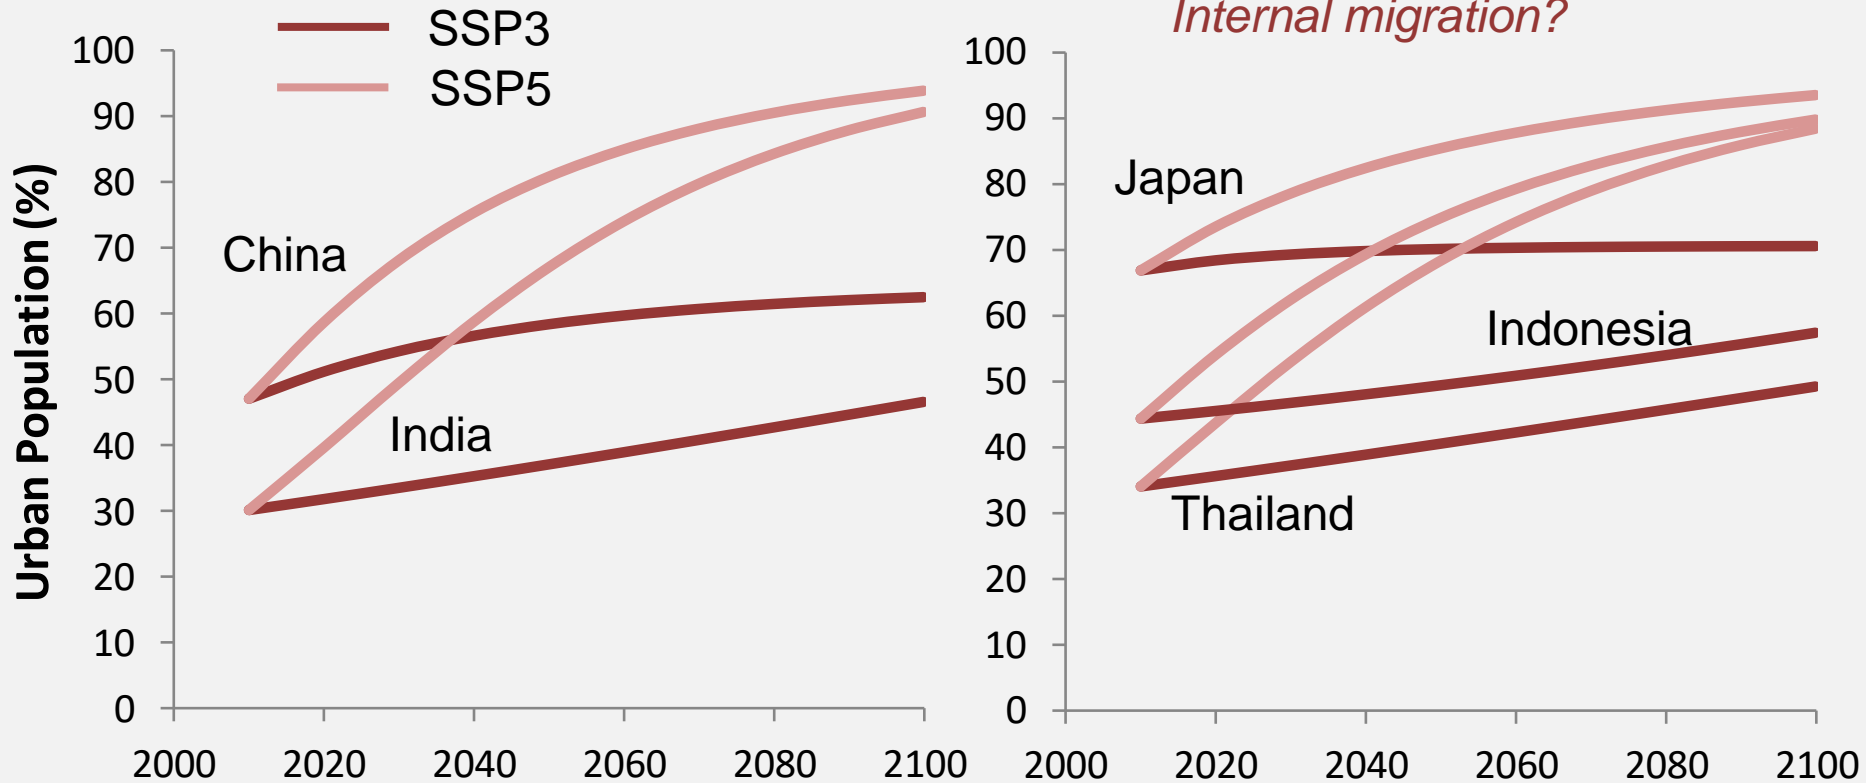

*What might Asia look like (especially demographically) in a world like this?*

# SSP Population, Asia

Based on KC and Lutz, 2015.

# SSP Urbanization, Asia

Based on Jiang and O'Neill, 2015.

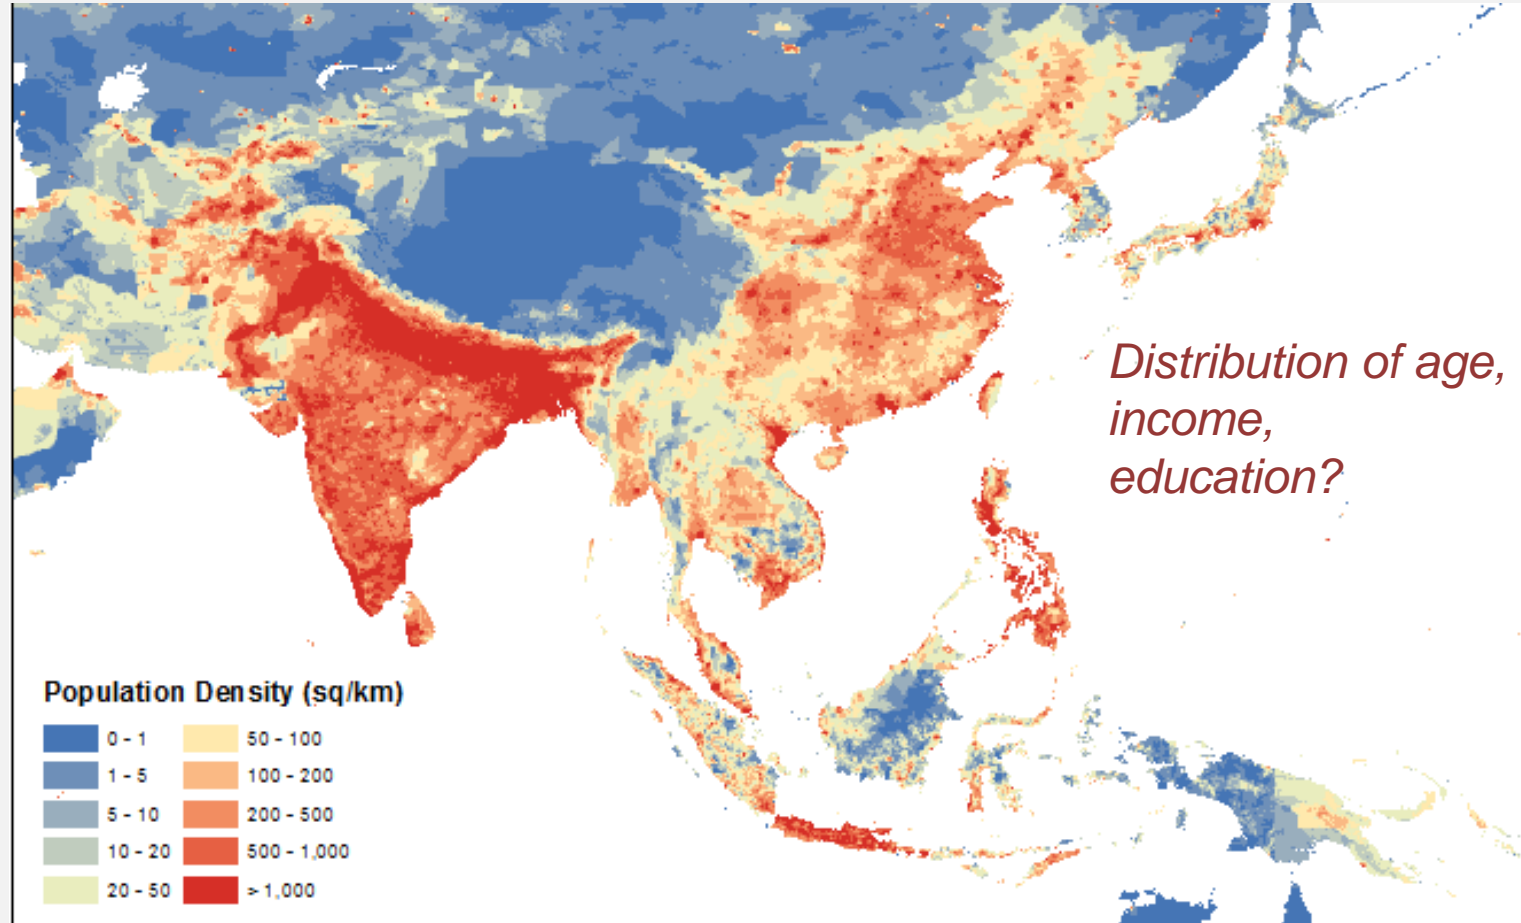

# SSP per capita GDP, Asia

Based on Dellink et al., 2015.

# Spatial Population Scenarios

## Asia region, 2100, SSP3

Based on Jones and O'Neill, 2016.

# Needs for Asian scenario elements

## Narratives

Asia-specific trends in societal/demographic development

## Migration

Current and projected changes in internal and international migration

## Income distribution

Current and projected changes in income inequality within Asian countries

## Spatial population characteristics

Current and projected spatial distributions of age structure, education, income

## Consumption patterns

See Tiantian's talk

# Vision: “Asian SSPs”

New or refined scenarios of demographic and social changes over next 50+ years in Asia

Collaboration across institutions

Provide a basis for studies of societal change, climate change, and sustainable development in the Asian region

Extra Slides

# Narratives methodology

## Adaptation challenges

SSP5=Low

Average Wealth  
Extreme Poverty  
Governance  
Water Availability  
Innovation Capacity  
Coastal Population  
Educational Attainment  
Urbanization  
...  
Quality of Healthcare  
Availability of Insurance

## Mitigation challenges

SSP5=High

Population  
Carbon Intensity  
Agricultural Productivity  
Energy Intensity  
Energy-related Tech. Change  
CCS availability  
...  
Effectiveness of Policy Institutions  
Energy Tech. Transfer  
Diet

Declining importance

# Conceptual framework: Determinants of risk and impacts

# Regional SSP Extensions

“European SSPs”

Socioeconomic scenarios for the Eurasian Arctic

Food and climate scenarios for Africa, Asia, Latin America

“Asian SSPs”?

# Evaluating SSPs for Asia

## Narratives

What aspects of society (especially demographic) would determine challenges to adaptation/mitigation in Asian countries?

Are new or more detailed narratives for Asia required?

## Quantitative elements

Are appropriate ranges of population, age structure, educational attainment, urbanization, spatial population represented in SSPs in Asian countries?

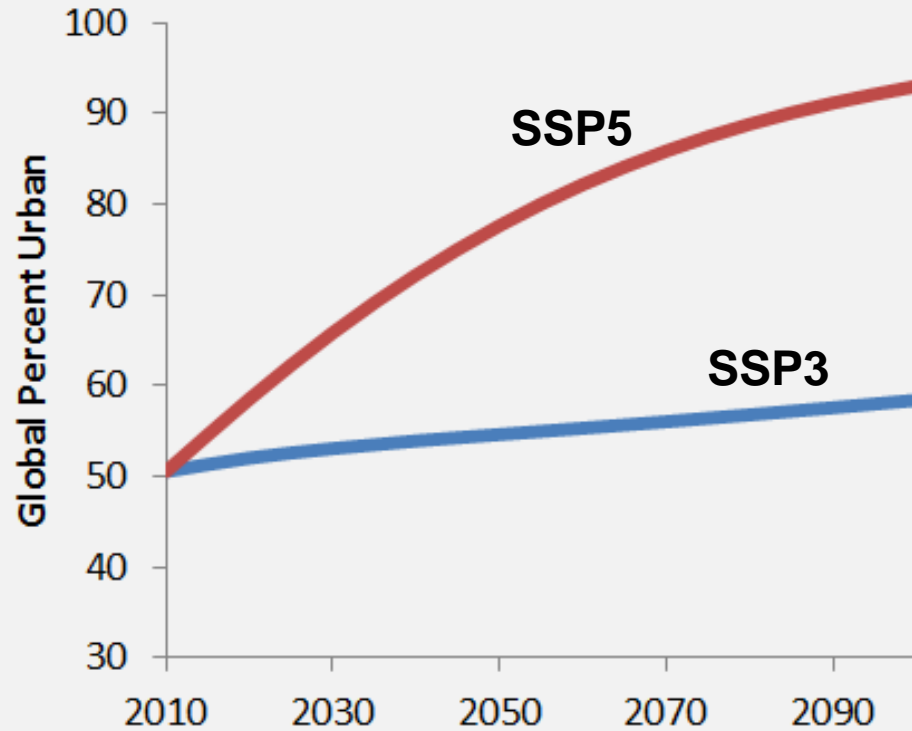

Are new or modified projections for Asia required?

# Quantitative elements

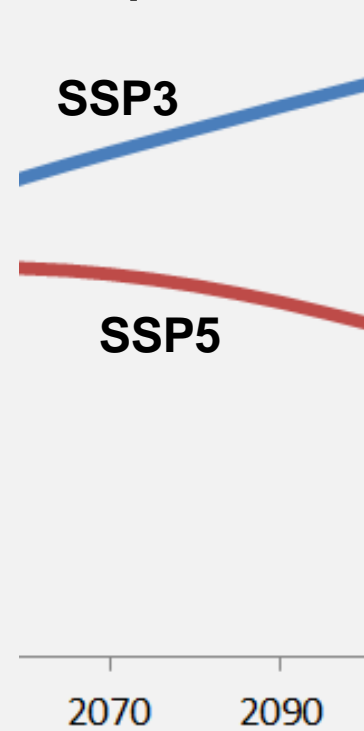

## Urbanization

## Population

## GDP

Jiang and O'Neill, 2015.

KC and Lutz, 2015.

Dellink et al., 2015.

# Applications: Emissions and Land Use

## SSPs

## Energy, Land use, Emissions

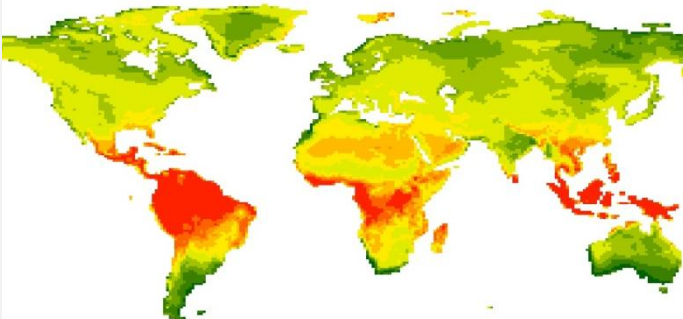

*Household  
consumption  
patterns?*

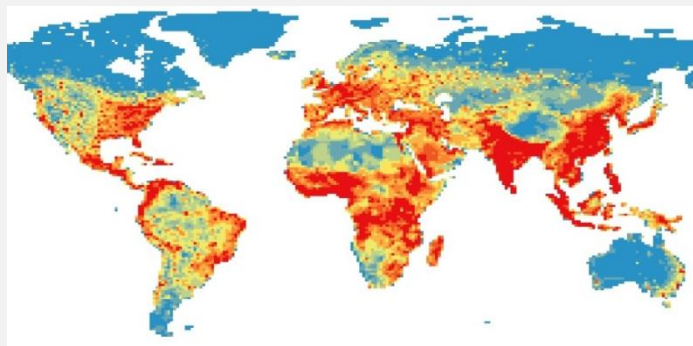

Riahi et al., 2016.

# Applications: Climate change impacts

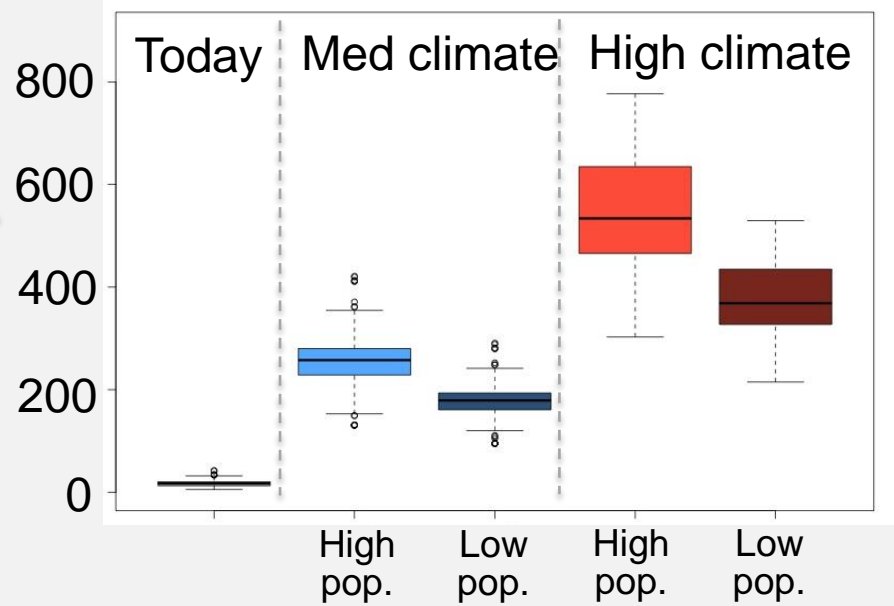

Climate model projections

Spatial population projections

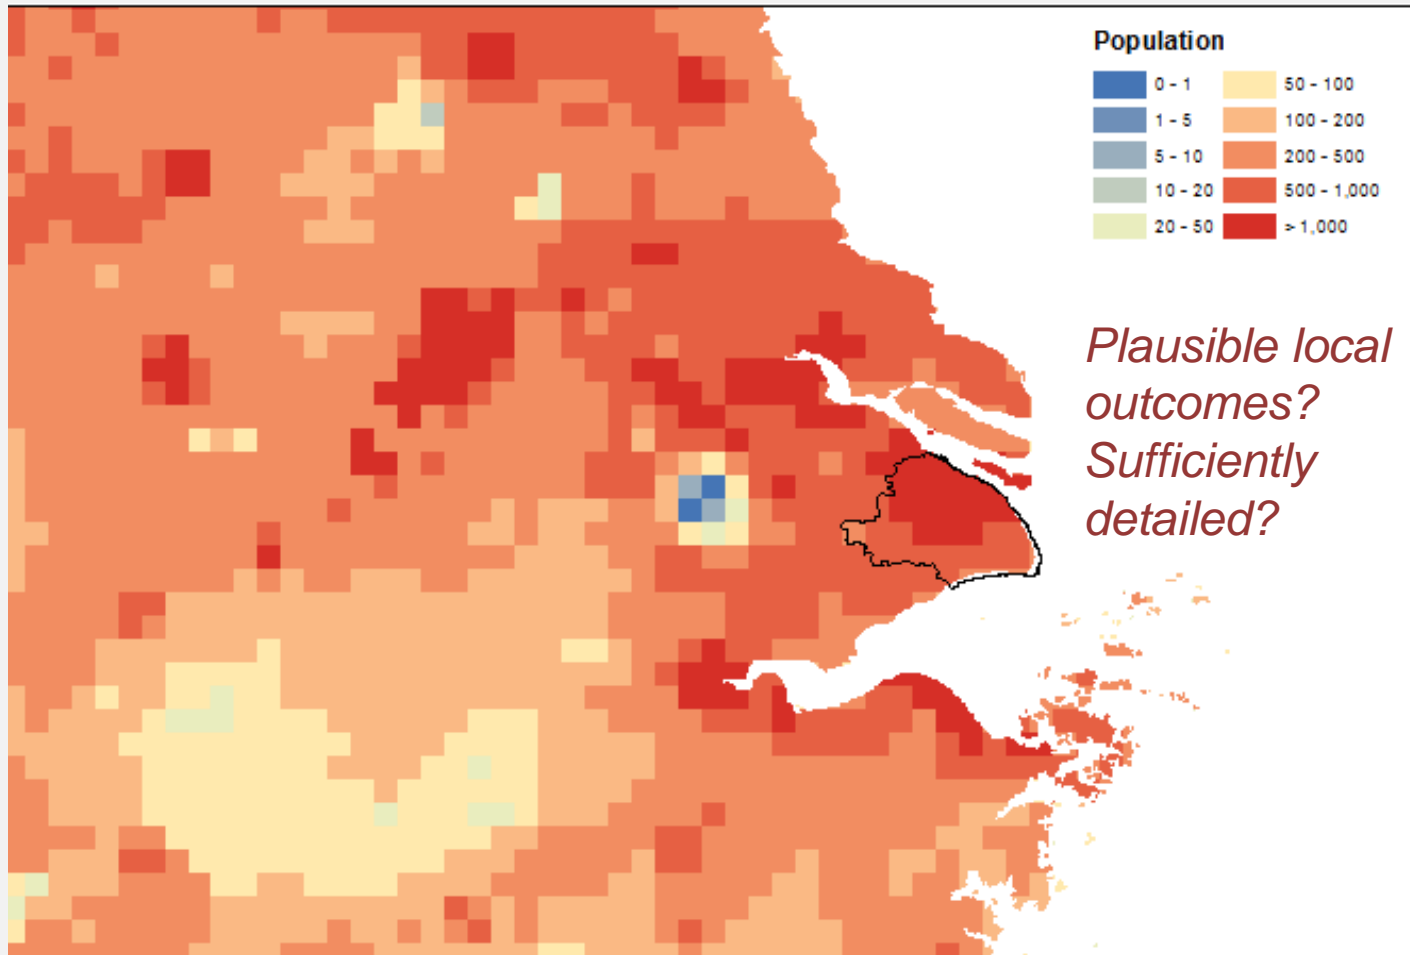

Billion person-days per year of exposure to heat waves, 2061-2080

*Exposure by age, income, education?*

Jones et al., in prep.

# Spatial Population Scenarios Shanghai region, 2100, SSP3

Based on Jones and O'Neill, 2016.
